AIA/CES Registered Provider Program:

# The Manufacturing of Hot-Rolled Steel Window and Doors – A Plant Tour

Hope's provides a comprehensive plant tour at our facility in historic Jamestown, New York. We guide you through the steel window manufacturing process step by step—from shop drawings to the finished product. Hope's uses the most advanced technology while still maintaining the integrity of a handcrafted product.

This plant tour will demonstrate the unique capabilities that hot-rolled steel offers as a window and door material. The physical attributes of hot-rolled steel—strength, durability, and life cycle—are apparent throughout this tour.

A combination of old skills and new technology make this a learning experience unlike any other.
